

CentrixMobile – Ordering System (CMOS)

CMOS is designed not only as a Mobile Ordering System but as a powerful tool to enhance your Order Fulfillment Process. This is a 360° approach in managing your customer interaction from retail inventory, service history and orders. Lowers down your cost in data catching activities while enhancing the scope of the data captured.

EASIER PROCESSING. MORE INSIGHTS.

Features.

- **CALL PROCEDURE BASED WORKFLOW** ensures discipline in your customer service management processes.
- **RETAIL SHELF INVENTORY** makes your call aligned with your client's business.
- **NO SALES, NO MISSED CALLS**
The system does not only look at sales visit but also visits with no sales to build buying pattern date set. The end goal is to make route planning more responsive.
- **SEAMLESS ORDER PROCESSING**
Order data are available on demand.
- **MANAGED CUSTOMER DATABASE** from the first point of data entry.
- **MODULAR** to fit your organizations basic call procedure.
- **INTEGRATED** together with our partners from Omnitracs Transportation Suite, we make your order fulfillment process into one stream from order taking to order processing to delivery route optimization.
- **LOCATION-BASED INTELLIGENT**
Used with a GPS enabled device, polling current position can be done real time.

Benefits.

- Centralized database of customer purchase histories enable data-mining capability for customer profitability analysis, strategic marketing, and up-sell / cross-sell.
- Sales efficiency and effectiveness is measured by looking at visit histories and customers buying behavior.
- All orders, customer visits, inventory data and their histories are captured and managed within a single repository for easier Business Intelligence processing.
