

# 1Go Control Tower

In today's fast paced and constant evolution of supply chains, the need to outsource and digitize becomes imperative. **1Go Control Tower** functions as a central hub that provides visibility across supply chain operations supported by a web interface and a voice technical support. This service coordinates orders and deliveries across the entire distribution network supported by a set of detailed, decision-making parameters operated by trained and highly skilled personnel.

A key advantage of this central hub is providing operations an integrated overview from various data and information it gathers that detects risks and likewise opportunities early on.

1Go Control Tower system architecture was developed by seasoned logistics and supply chain operations professionals utilizing leading-edge technologies.

## Benefits.

### **Cost Savings: Labor, Infrastructure, and Technology**

Increased supply chain visibility leads to improved business and operations decision making and planning, performance improvement of supply chain partners, and enables more sophisticated supply chain analytics.

### **Increased competitiveness**

Outsourcing your Supply Chain processes gives you the benefit of industry expertise that results to high quality service and competitive advantage.

### **Better management decisions**

With end-to-end visibility, organizations will need to have the right technology in place, a platform that tracks products/shipments right when it leaves the warehouse until it reaches its destination. 1Go Control Tower provides a web-based application that oversees all shipment, driver and vehicle activities from first to last mile, all in real-time.
