

1Go Warehouse Management System (WMS)

In today's fast-paced and evolving consumer demands, traditional inventory handling and manual processes exposes daily warehouse to various operational issues such as stock unavailability, slow movement of items, and ultimately customer dissatisfaction. Meeting these demands and improving overall efficiency will only be obtained by having the right tools and technology in place.

Acquiring a warehouse management system establishes efficient process workflow and speeds up operations. 1Go WMS provides a centralized web portal that oversees stock level & movement into, within, and outside warehouses in real-time. This is integrated with mobile and desktop applications that captures warehouse, distributor, sales office and outlet inventory. The system can likewise generate reports from these information.

Features.

Inventory Management

Monitor history of inventory movement (Incoming, Inbound, Outbound, Outgoing, Van/Zone Loading, Returns/Bad Stocks).

Slotting & Optimization

All inventory in warehouses, sales offices and outlets are divided into zones, this enables searching to be optimized.

Mobile App

WMS is integrated with a mobile inventory system that captures all inventory data and generates these into useful reports.

Billing and Dispatch

Sales orders and invoices are generated using a mobile/desktop inventory system that automatically syncs into WMS. Once the orders are received, items can be loaded and are ready for delivery.

Bar Coding

All SKUs are provided with specific bar codes per product which is assigned by the supplier.

Insights/Reports

This platform automatically generates reports (Stock Level, Inventory On-Hand, Ending Inventory) gathered from the mobile and desktop inventory systems.

Requisition Processing

Automates the process of creating Purchase Requests (PR), Purchase Orders (PO) and Release Advices (RA).

Benefits.

- Monitor stock availability thus meet customer demands
- Provides a strategic basis for inventory planning
- Gain wider visibility of all warehouses, sales offices and outlets
- Access all inventory data in real-time
- Seamless and streamlined operational execution

Real-time visibility and seamless control of warehouse inventory.
